

GradCafe Analysis Dashboard

1. How many Fall 2026 applications are in the database?

Answer: 9888

2. What percentage of applicants are international students?

Answer: 52.50%

3. What are the average GPA and GRE scores?

Answer: GPA: 2.77
GRE: 870.00
GRE Verbal: 154.14
GRE AW: 0.37

4. What is the average GPA of American students applying for Fall 2026?

Answer: 2.88

5. What percentage of Fall 2026 applicants were accepted?

Answer: 100.00%

6. What is the average GPA of accepted students?

Answer: 2.76

7. How many applicants applied to Johns Hopkins MS Computer Science?

Answer: 0

8. How many Fall 2026 applicants were accepted into Computer Science PhD programs?

Answer: 5838

9. How many records were enriched using the LLM?

Answer: Programs identified: ['Computer Science PhD', 548], ['Computer Science Masters', 504], ['Physics PhD', 428], ['Chemistry PhD', 322], ['Economics PhD', 322], ['Mathematics PhD', 274], ['Philosophy PhD', 204], ['Statistics PhD', 166], ['Electrical And Computer Engineering PhD', 166], ['English PhD', 152]
Universities identified: ['Accepted', 'Declined', 2.77]]

10. Average GPA by admission status

Status: Average GPA
Accepted: 2.77

11. Top 10 most applied programs

Program	Applications
Computer Science PhD	548
Computer Science Masters	504
Physics PhD	428
Chemistry PhD	322
Economics PhD	322
Mathematics PhD	274
Philosophy PhD	204
Statistics PhD	166
Electrical And Computer Engineering PhD	166
English PhD	152

[Scraper New Data] [Recompute Analytics]

This project is a four-service Docker Compose application. The Flask web app serves the dashboard on port 8080 and publishes background tasks to RabbitMQ when a button is clicked, returning immediately without making the user wait. A Python worker runs in the background consuming those messages and performing the actual scraping and analytics work against a

PostgreSQL database. Data is loaded from a JSON file into the applicants table using parameterized SQL, and an ingestion watermarks table tracks where the scraper left off so duplicate records are never inserted. All four services communicate over a private Docker network and are wired together with health checks, so nothing starts before its dependency is ready.
